SUMMARY

Business continuity leader with a 20-year career built across business operations, IT, and consulting, bringing a broad cross-functional perspective to continuity and resilience work. Effective at understanding end-to-end operational and data flows, identifying single points of failure, and assessing risks across supply-chain and enterprise environments. Skilled in ISO 22301/22318 alignment, governance in regulated industries, audit readiness, and customer-experience-focused continuity planning. Known for bringing structure to complex environments, driving clarity through analysis, and guiding teams toward decisions by translating technical, operational, and risk-based insights into actionable direction. Brings a calm, structured approach to ambiguity, stakeholder alignment, and decision-driving analysis.

CORE SKILLS

- Business Impact Analysis, Business Continuity Plans, and dependency mapping
- Continuity strategy development aligned with ISO 22301, ISO 22318, and NIST
- Process governance design, documentation standards, and lifecycle maintenance
- Supplier continuity and critical-dependency risk identification
- Cross-functional analysis and facilitation across manufacturing, supply chain, IT, FSQR, HR, and corporate teams
- Incident participation, structured communication, and after-action integration
- Continuous improvement, roadmap development, and Agile work-management practices
- Operational risk analysis, cutover readiness, and transition planning

PROFESSIONAL EXPERIENCE

Security & Risk Analyst III / Business Continuity Manager — Cargill (2018–2026)

- Managed the full business continuity lifecycle (BIA, BCP, dependency mapping, recovery requirements), ensuring accurate, audit-ready documentation across assigned functions.
- Led structured working sessions with SMEs and leaders to clarify operational workflows, system behaviors, and continuity-relevant dependencies required for BIAs and continuity planning.
- Documented critical processes, dependencies, RTO/RPO needs, and recovery priorities to the level required for continuity without expanding into non-BCP process-mapping ownership.
- Identified gaps in process clarity, ownership, and handoffs affecting continuity outcomes; partnered with teams to resolve ambiguities and align documentation with actual operational practice.
- Strengthened cross-functional alignment by helping teams articulate upstream/downstream impacts, system dependencies, and operational consequences of disruption.
- Developed and delivered continuity training, communication, and guidance, improving planner capability, documentation quality, and adherence to structured continuity standards.
- Maintained continuity documentation to internal governance standards, ensuring accuracy, consistency, and support for risk-based decision-making.
- Collaborated with leaders to validate critical processes, recovery priorities, and risk tolerance, grounding recommendations in operational realities and business requirements.

Senior Business Analyst / Product Owner – Securian Financial (2017 – 2018)

- Supported operational continuity and readiness during onboarding of an international credit-card servicing program, aligning requirements, data flows, and downstream impacts across business and technical teams.
- Led cross-functional delivery for an international expansion initiative, coordinating business, technology, compliance, and operational stakeholders across multiple regulatory jurisdictions.
- Managed a structured backlog of epics, user stories, acceptance criteria, and sprint tasks, ensuring clear requirements, traceability, and timely delivery in a regulated financial environment.
- Directed data-mapping and requirements analysis across complex systems, clarifying upstream/downstream impacts, validating data integrity, and identifying risks tied to system behavior.
- Facilitated decision-driving sessions to resolve requirements conflicts, risk considerations, and stakeholder alignment across impacted teams.
- Supported sprint-based delivery through structured planning, prioritization, and cross-team coordination, ensuring readiness for cutovers, integrations, and operational transitions.

Senior Business Systems Analyst – Green Tree / Ditech (1997 – 2017)

- Supported the enterprise migration of 1.5M loan records from a proprietary servicing platform to an industry-standard system, preserving regulatory compliance, operational continuity, and customer-facing processes
- Analyzed end-to-end business processes, system handoffs, and data flows to understand how information moved across functions and how it needed to be represented in the target platform.
- Developed data-structure diagrams, wrote SQL queries, and used AS400 to analyze tables, formats, and legacy logic, ensuring accurate mappings and alignment with consumer-finance and collections regulations.
- Partnered with internal teams and external vendors to clarify system requirements, surface migration risks, and shape a comprehensive requirements plan grounded in operational needs.
- Validated workflow impacts, consumer communications, collections practices, and regulatory triggers to ensure servicing rules behaved correctly after conversion, strengthening compliance and reducing operational risk.

EDUCATION & CERTIFICATIONS

M.S., Strategic Leadership — Black Hills State University

B.S., Business Administration (Minor: Cybernetics) — San José State University

A.A., Liberal Arts — De Anza College

Certified Business Continuity Professional (CBCP) — DRI International

Completed coursework for Certified Business Continuity Auditor (CBCA) — DRI International
