Senior Business Systems Analyst

Experienced in leading cross-functional analysis, requirements discovery, and enterprise-scale solution delivery across complex operational environments. Known for translating business objectives into clear, testable requirements, facilitating alignment between business, architecture, development, and QA teams, and ensuring solutions are holistically understood before implementation. Skilled in Agile delivery, user story development, acceptance criteria definition, defect triage, and supporting high-quality releases in fast-moving, ambiguous environments.

Core Competencies

- Requirements elicitation, documentation, and traceability
- Cross-functional facilitation & stakeholder alignment
- Agile SDLC, user stories, acceptance criteria, backlog clarity
- Process discovery & operational analysis
- Cutover readiness, migration support, and issue triage
- Business–technical translation & impact analysis
- QA partnership, test case alignment, and defect management
- Clear communication across technical and non-technical audiences

Professional Experience

Cargill – Risk & Security Analyst III

Led continuity-aware operational analysis and cross-functional discovery across a multi-site environment. Built and managed an Agile structure to drive clarity, documentation, and stakeholder alignment for complex initiatives.

- Facilitated requirements discovery across business, architecture, and technical teams, ensuring shared understanding of impacts, dependencies, and operational risks.
- Developed detailed process flows, use cases, and documentation to support solution design and downstream testing.
- Partnered with QA and SMEs to ensure requirements were testable, traceable, and aligned to business expectations.
- Supported issue triage and resolution during cutover and stabilization, ensuring defects were understood, prioritized, and communicated clearly.
- Produced governance-ready documentation and analysis to support operational decision-making.

Securian Financial – Business Technology Analyst / Product Owner

Owned one of three major workstreams for an international expansion initiative, driving requirements, backlog clarity, and cross-functional delivery.

- Translated business needs into clear user stories, acceptance criteria, and functional documentation for development and QA teams.
- Facilitated Scrum ceremonies, managed backlog prioritization, and ensured alignment across business, architecture, and development.
- Led impact analysis for proposed changes, ensuring downstream effects across systems and teams were understood.
- Partnered with QA to validate test coverage, clarify scenarios, and support defect triage throughout the sprint cycle.
- Presented sprint outcomes and solution updates to senior stakeholders, ensuring transparency and expectation alignment.

Green Tree / Conseco / Ditech – Senior Analyst

Supported the migration of 1.5 million loan records and the associated cutover planning, requirements documentation, and defect management.

- Documented complex system requirements and collaborated with development and QA to ensure clarity and testability.
- Led defect triage during migration cycles, ensuring issues were understood, prioritized, and resolved within tight timelines.
- Conducted cross-functional analysis to identify operational impacts and ensure readiness for large-scale data transitions.
- Supported UAT, issue resolution, and stabilization activities across multiple teams.

Education

- M.S., Strategic Leadership – Black Hills State University
- B.S., Business Administration (Minor: Cybernetics) – San José State University
- A.A., Liberal Arts – De Anza College
- CBCP and CBCA coursework completed

Technical Skills

JIRA, Confluence, Microsoft Office (Word, Excel, PowerPoint), Visio, process mapping, Agile tools, requirements management, defect triage workflows
