Professional Summary

Business continuity leader with deep experience across the full continuity lifecycle and a focus on aligning continuity practices with real operational flow. I strengthen programs by grounding them in standards, regulatory requirements, and established business definitions while ensuring they remain practical for day-to-day operations. I take initiative to understand stakeholder expectations and drive continuous improvements that increase clarity, resilience, and audit credibility.

Core Capabilities

- Business Impact Analysis, Business Continuity Plans, and dependency mapping
- Continuity strategy development aligned with ISO 22301, ISO 22318, and NIST
- Governance design, documentation standards, and lifecycle maintenance
- Supplier continuity and critical-dependency risk identification
- Cross-functional facilitation across manufacturing, supply chain, IT, FSQR, HR, and corporate teams
- Incident participation, structured communication, and after-action integration
- Continuous improvement, roadmap creation, and Agile work-management practices
- Operational risk analysis, cutover readiness, and transition planning

PROFESSIONAL EXPERIENCE

Cargill — Risk & Security Analyst III - Business Continuity Leadership CPNA

- Managed the BCM program for a multi-site North American enterprise, driving lifecycle execution, standards alignment, and operational readiness across 46 plants and 9 distribution centers.
- Managed the Business Continuity Management (BCM) program for Cargill Protein North America, overseeing lifecycle activities, governance, stakeholder engagement, and cross-functional alignment across the enterprise.
- Took CPNA from 0% to 100% completion of BIAs and BCP development across 46 plants and 9 distribution centers, establishing a consistent, standards-aligned approach to identifying critical activities and dependencies.
- Aligned continuity practices with ISO 22301, ISO 22318, NIST, and corporate policies, ensuring lifecycle work remained compliant, structured, and grounded in real operational flow.
- Evaluated global customer audit questionnaires (EMEA, LATAM, APAC) by mapping questions to ISO/NIST expectations; analyzed corporate responses for gaps and inconsistencies; and

developed a standardized, audience-appropriate response framework that strengthened audit credibility.

- Designed a more accessible and operationally intuitive way for stakeholders to view and use continuity strategies, improving clarity, usability, and day-to-day applicability across plants and distribution centers.
- Facilitated dependency-mapping sessions and strategy discussions with plant SMEs, identifying critical applications, equipment, and third-party dependencies and documenting practical continuity steps for outages.
- Led a structured continuous-improvement initiative to close customer audit and documentation gaps: performed gap analysis, prioritized remediation, built a roadmap, and translated work into epics and stories in Jira; produced updated, audit-credible documentation in Confluence.
- Delivered continuity training to 500+ leaders globally and provided targeted SME education during strategy development.
- Supported incident response through structured communication, escalation support, and after-action reviews, integrating lessons learned into lifecycle updates.

Securian Financial — Senior Business Analyst / Product Owner

- Ensured operational continuity and readiness during onboarding of a Canadian credit-card company.
- Led cross-functional delivery for an international expansion initiative, aligning business, technology, compliance, and operational stakeholders across multiple regulatory jurisdictions.
- Managed a structured backlog of epics, user stories, and sprint tasks, ensuring clear requirements, traceability, and timely delivery in a regulated financial environment.
- Directed data-mapping and requirements analysis across complex systems, clarifying upstream/downstream impacts and validating data integrity.
- Facilitated stakeholder sessions to resolve requirements conflicts and drive risk-aware decisions.
- Supported sprint-based delivery through structured planning, prioritization, and cross-team coordination.

Green Tree / Ditech — Senior Business Systems Analyst

- Supported the enterprise migration of 1.5 million loan records from a proprietary servicing platform to an industry-standard system, ensuring regulatory compliance and operational continuity.
- Analyzed end-to-end business processes, system handoffs, and data flows to understand how information moved across functions and how it needed to be presented to users.

- Developed data-structure diagrams, wrote SQL queries, and used AS400 to analyze tables, formats, and system behavior, ensuring accurate mappings and compliance with consumer finance regulations.
- Collaborated with internal teams and external vendors to clarify system requirements, identify migration risks, and develop a comprehensive requirements plan.
- Ensured consumer communication, collections practices, and regulatory obligations were preserved throughout migration by validating data behavior and workflow impacts.
