SUMMARY

Business Systems Analyst and Continuity Leader with deep expertise in operational workflows, system-behavior analysis, and structured requirements development. Skilled at translating complex environments into clear BRDs, workflow maps, and fit/gap analyses that drive alignment across business, technical, and operational teams. Strengthens decision-making and delivery quality through disciplined documentation governance, audit-ready artifacts, and cross-functional facilitation that supports testing, readiness, and enterprise-level adoption.

CORE SKILLS

- Requirements elicitation, workflow mapping, fit/gap analysis, and structured problem decomposition
- User stories, acceptance criteria, and requirements traceability across business and technical teams
- End-to-end process analysis, upstream/downstream dependency identification, and operational alignment
- Data mapping, system-behavior analysis, and validation of logic, rules, and data integrity
- BRD development, documentation governance, and audit-ready artifacts supporting delivery and readiness
- UAT planning, test-scenario design, defect triage, and stakeholder sign-off
- Cross-functional facilitation with SMEs, operations, technology, compliance, and leadership
- Communication materials, decision-support summaries, and executive-ready insights
- Confluence architecture, structured documentation, and template/standards management
- Organizational readiness, change-focused communication, and adoption support
- Continuity-aware analysis of system dependencies and operational impacts (supporting competency, not primary)

EXPERIENCE

CARGILL — Security & Risk Analyst III / Business Continuity Manager

Wayzata, MN | 2018–2026

- Directed cross-functional analysis across Protein North America to document operational workflows, expose dependencies, and deliver audit-ready continuity strategies.
 - Assessed system behavior during power-loss scenarios, documenting access-control, monitoring, and event-logging dependencies to isolate operational continuity risks.
 - Developed continuity strategies integrating plant operations, system dependencies, and critical workflows into enterprise-level risk mitigation planning.
 - Governed documentation standards, templates, and Runbook structure for the CPNA Confluence space, ensuring consistency, version control, and alignment with BCM requirements.
 - Delivered operationally grounded recommendations to senior leadership, shaping strategic planning, future-state design, and continuity priorities.
-

SECURIAN FINANCIAL — Senior Business Systems Analyst

Saint Paul, MN | 2014–2018

- Supported Agile delivery in a regulated financial environment by managing sprint flow, facilitating Scrum ceremonies, and maintaining alignment across business and technical partners.
 - Led backlog refinement, sprint planning, and cross functional coordination to keep work prioritized and moving.
 - Developed user stories, acceptance criteria, and supporting documentation to drive clarity and shared understanding across teams.
 - Led the letter sub project, documenting US and Canadian rules, system logic, account level logging, and barcoding requirements from definition through UAT.
 - Facilitated SME and stakeholder working sessions to surface requirements, dependencies, and operational impacts.
 - Supported UAT planning and execution to validate functionality and confirm readiness for release.
-

GREEN TREE / DITECH — Business Systems Analyst

Saint Paul, MN | 1997–2014

- Analyzed system behaviors and operational workflows across loan servicing operations, isolating gaps, dependencies, and improvement opportunities.
 - Delivered BRDs, requirements, process maps, and test scenarios supporting system changes and operational readiness.
 - Led SME and IT working sessions to clarify workflows, validate requirements, and drive delivery of compliant, scalable solutions.
 - Produced structured documentation and communication materials supporting training, adoption, and ongoing operational alignment.
-
