SUMMARY

Senior Business Systems Analyst experienced in gathering and clarifying business, functional, and technical requirements; facilitating JAD sessions; and producing clear, audit-ready documentation. Skilled in Agile delivery using Jira and Confluence (administrator-level), process mapping in Visio, and supporting UAT to ensure solutions meet business needs. Known for structured analysis, strong written communication, and aligning SMEs across technical, operational, and business teams in regulated environments.

CORE CAPABILITIES

Requirements Discovery & Clarification • JAD Facilitation • Technical Writing & Documentation Quality Review • SDLC (Waterfall & Agile) • Jira & Confluence (Administrator-Level) • UAT Test Case Development & Execution • Process Mapping (Visio) • As-Is/To-Be Analysis • Change Requests & Change Control • Cross-Functional Alignment • Operational & Continuity Analysis • Archer (GRC) & Fusion (BCM) • Microsoft Project & Planner (Working Proficiency) • Google Workspace

---

EXPERIENCE

CARGILL — Security and Risk Analyst III / Business Continuity Manager

- Served as the Confluence administrator for the CPNA business, designing space architecture, templates, and documentation standards to support continuity workflows, SME collaboration, and audit-ready content.
- Managed permissions, content structure, and governance within Confluence to ensure documentation accuracy, version control, and cross-team usability.
- Participated as a SME in requirements discussions for Archer enhancements and the enterprise migration to Fusion, contributing to UI design considerations, data migration requirements, and ISO-aligned workflow applicability.
- Developed and executed UAT test cases for Archer enhancements and the Fusion migration, validating system behavior, workflow logic, and data integrity against business and operational requirements.
- Analyzed gaps between Fusion's workflow capabilities and manufacturing operational needs, leading to the design and delivery of a Confluence-based Runbook that accurately reflected production and logistics workflows.
- Managed the full BCM program for the CPNA business, including epics, user stories, and tasks in Jira to support planning, prioritization, and delivery.
- Facilitated JAD-style working sessions with SMEs and technical teams to confirm requirements, dependencies, and system constraints.
- Supported UAT and operational readiness activities to ensure requirements were testable, traceable, and aligned with business needs.

SECURIAN FINANCIAL — Senior Business Systems Analyst

- Managed one of three Agile workstreams, coordinating backlog refinement, sprint planning, and cross-team alignment across a team representing one-third of the overall program.
- Facilitated requirements discovery with SMEs across business operations, technical teams, and product owners to clarify scope, surface dependencies, and resolve conflicting interpretations.
- Developed user stories, acceptance criteria, and functional specifications using Jira and Confluence.
- Created process documentation, data mapping, and workflow clarifications to support system changes and regulatory compliance.
- Partnered with QA and development teams to ensure requirements were testable, traceable, and aligned with acceptance criteria.

GREEN TREE / DITECH — Business Analyst

- Supported project coordination activities during the enterprise migration of 1.5M loan records, including tracking deliverables and partnering with offshore QA resources.
- Collaborated with SMEs across servicing, operations, and technical teams to clarify requirements and validate data transformation rules.
- Documented business processes and system interactions to support migration readiness and downstream impact analysis.
- Ensured requirements were testable, traceable, and aligned with regulatory expectations.
